

Turf Nu's

September Edition 2011

Acelepryn Insecticide

DuPont™ Acelepryn® Insecticide

DuPont™ Acelepryn™ insecticide is now into its 4th growing season and we are still amazed at the impressive results we see out in the field, since its release in 2008. **Acelepryn** is now clearly the No.1 insecticide in the Australian turf market. **Acelepryn's** strength is its ability to control a very wide range of turf damaging pests including African black beetle, Argentinian Scarab, Argentine Stem Weevil, Billbug, Cutworm, Lawn Armyworm and Sod webworm.

Another strength of **Acelepryn** is its user safety characteristics and environmental benefits. As a result of it being unclassified, **Acelepryn** is easy and very safe to apply, both for the applicator and the general public. In addition, **Acelepryn** has an outstanding environmental profile and poses little threat to bees, birds and fish.

Other key benefits of **Acelepryn** are;

- **NOVEL MODE OF ACTION**
- **UNRIVALLED RESIDUAL CONTROL OF LEPIDOPTERA CUT WORM, SOD WEBWORM, LAWN ARMY WORM.**
- **STILL THE SAFEST INSECTICIDE IN THE TURF MARKET TO BOTH THE END USER AND THE CLIENTEL.**
- **PROVIDES THE LONGEST RESIDUAL CONTROL FOR SOIL BOURNE INSECTS.**
- **UNPARALLELED ENVIRONMENT BENEFITS.**
- **ITS LOW SOLUBILITY COMPOUND PROVIDES LONG TERM CONTROL DESPITE FLUSHING RAINS OR LOW CEC SOIL PROFILES.**

Acelepryn Performance – Testimonials

“The new technology of **Acelepryn**® was more user friendly. It was better for myself, the operator, better for the environment and better for users as well. “I put it out early in the season at the end of August and it has given me season long control over the last two years. It saves me going out again. I try to avoid spraying as much as I can because there is always someone looking at you and wanting to know what you are doing so the less I can do that the better. I was (previously) spraying two or three times a season which is not convenient to me. To spray a field it takes a lot of time out of my schedule. “I haven’t had any major outbreaks at all. It’s important to use less toxic but an effective ingredient that is going to attack my target insects. It’s going to be user friendly so I can spray at any time of the week.

Paul Chalmers Ground Manager, St Aloysius’ College.

Acelepryn Testimonials Continued

“Since **Acelepryn**[®] has been around you wouldn't go past it for anything else. Two years ago I did a bit of trial work and found that it seemed to be doing a very good job and now we're spraying it on all our tracks. It's doing an excellent job. In a recent situation, we laid six hectares of turf on a new track in Rockhampton, sprayed it with **Acelepryn**[®] in January and did not get one bit of lawn grub whatsoever.

Warren Williams, Race Course Development Manager Queensland Racing.

The last two seasons we've used **Acelepryn**[®] for several reasons. It fits in well with our environmental management and OH&S plan, particularly with the feeder creek that runs through the middle of the golf course directly into the sensitive Homebush Bay and Parramatta River system. “We like to evaluate the best chemical options available to us. It's peace of mind for myself, our staff, the committee and everyone that uses the course. The initial benefit of using **Acelepryn**[®] is that only one application is required on our fairways and roughs to get us through the entire season. Moreover, this application can be made in the non-essential late winter period when spray application timing is not as critical. It is also a winner when evaluating time management and labour costs incurred. “In the past 2 seasons, we have observed no bird damage whatsoever on our fairways and light roughs. It is brutally obvious to see where the spray lines end at the edge of our roughs and the larvae damage explodes.

Stephen Jacobsen, Golf Course manager, Carnarvon Golf Club.

Triple Shot Herbicide

- Australian Made.
- Possesses both Contact & Systemic activity.
- Broad label registration.
- Ester Formulation for control of tough weeds.
- In HDPE Plastic Drums (Easy to pour – No rusting).
- Cost effective.
- Quick knockdown.
- Rate – 4 - 5L/Ha.

Nuturf Plant Protection Use Guides

Everything you need to know when selecting your Fungicides, Herbicides, Insecticides & Adjuvants. Get your FREE copy today from your Nuturf Territory Manager!

The image displays three overlapping Nuturf Plant Protection Use Guide charts. The top chart is the 'HERBICIDE USE GUIDE', the middle is the 'FUNGICIDE USE GUIDE', and the bottom is the 'INSECTICIDE USE GUIDE'. Each chart is a detailed table with columns for product name, target weed, application rate, and other technical specifications. A 'NEW!' starburst graphic is located in the bottom left corner of the overall image.

Nuturf Spring Fertiliser Special

Get in Early to be ready for Spring and be Rewarded!

Receive a \$50 Coles-Myer gift card for every Tonne of Nuturf Black Label Fertiliser, Poly Smart Fertiliser, Pre-M or Ronstar + Starter Fertiliser purchased and invoiced during the months of August and September 2011.

Spring - Summer 2011 Special Offer

Buy **50 bags of TX 10** between July 1st and December 31st 2011 and receive a **10L RocaStem** valued at over \$350.00 for **FREE**

Stamina Relieve - Now Available!

Stamina Relieve is a soil-amending polymer, specifically developed to assist in optimising air:water ratios in the soil, particularly in heavier rootzones.

The charged polymer molecules in Stamina Relieve are electrostatically attracted to clay or silt particles and their attached ions. As a result, the polymer strings link individual particles and increases aggregate stability within the soil. This results in greater porosity, enhances water availability for plant uptake and ensures adequate drainage in the top of the soil profile.

How Stamina Relieve can Help You

- Improves aeration and permeability in the soil.
- Enhances water availability.
- Improves Water infiltration.
- Ideal for use in the winter months to keep the rootzone from becoming over saturated.
- Ideal for tank mixing with other Stamina Surfactants.
- Eliminates wet/dry spots.
- Significantly increases water movement.
- Non toxic and environmentally safe.
- Low use rates, allowing for Economical treatment over larger areas.

Soil Testing Incentive 2011

Undertake your soil testing with Nuturf, and as a thank you for supporting our Agronomy Services Division and Soil Testing Service, you will go into the draw for the chance to win the following prize:

Apple iPad 2, 16GB with 3G & Wi-Fi!

For further information or advice call your Local Nuturf Territory Manager or visit www.nuturf.com.au.

Double Time Herbicide

- Proven Performance over many years.
- Quick Control – Knocks over weeds in 7 – 14 days.
- Very cost effective form of Broadleaf weed control.
- Low Scheduling / Non Ester Formulation
- Registered for use on golf and bowling greens.
- Registered for Non Crop situations as well as turf.
- Available in HDPE Plastic containers (Kamba M is still in tin drums).
- Rate – 6.5L/Ha

Send the Pests packing from your workplace!

Nuturf has the answers to insect pests in your workshed, irrigation boxes and warehouse.
