

## KIESERITE *Magnesium sulphate granular*

**Active ingredients** 15% magnesium, 16% sulphur

**Pack size** 25kg, 1T

Kieserite is a naturally occurring mineral that is chemically known as magnesium sulphate monohydrate. It is mined from ancient marine deposits and used as a source of magnesium and sulphur.

Kieserite is slowly water soluble and suitable for soil application.

### Key benefits of Kieserite

- Suited for blending with other granular fertilisers in custom blends
- Dissolves slowly with soil moisture to better match ongoing turf demand
- Will not leach as quickly as soil applied magnesium sulphate heptahydrate
- Increases chlorophyll production and increases photosynthesis
- Ideal for use on turf grown in low magnesium soils

### Directions for use

Can be used as a soil applied granular magnesium supplement in a regular nutrition program. Broadcast Kieserite as a soil magnesium supplement to increase magnesium levels. Multiple applications may be needed throughout the season.

Application Rate Table

Situation	Rate	Comments
Turf	150-600 kg/ha	Rates will vary for each situation. See your local agronomist for a prescribed nutrient budget to determine the optimum application rate for your specific purpose.
