

Technical Information Sheet

Garlon 600 *A herbicide for the control of woody weeds*

Active ingredients 600g/l triclopyr

Pack size 5L and 10L

GROUP

HERBICIDE

For control of a range of woody weeds and melons as specified in the label directions.

Garlon has a label registration for a wide range of problem woody weeds in the Australian environment including, but not limited to, eucalypts, gorse, boxthorn, acacia, camphor laurel, prickly pear, groundsel bush, brigalow, privet, rubber vine, paperbark tea tree, lantana and blackberry.

Garlon 600 can be applied through high volume spray equipment, controlled droplet applicators, low volume equipment, knapsack sprayers and by using a cut stump or basal bark application method.

Benefits of Garlon 600

LOW COST Compared to other herbicide applications making it a viable alternative in many situations.

BROAD SPECTRUM of plants controlled by Garlon 600 makes it an effective herbicide for treatments where a complete knockdown is required.

HIGH COMPATIBILITY with selected other herbicides including glyphosate and starane, see label for details.

Garlon 600 is a member of the pyridines group of herbicides. The product has the disrupters of plant cell growth mode of action. For weed resistance management the product is a group I herbicide.

Directions for use

DO NOT apply to weeds which may be stressed (not actively growing) die to prolonged periods of extreme cold, moisture stress (water-logged or drought affected), poor nutrition, presence of disease or previous herbicide treatment as reduced levels of control may result.

DO NOT spray if rain is likely within 1 hour or if foliage is wet from rain and dew. However, when tank mixed with glyphosate, this time extends to 6 hours.

DO NOT burn off, cut or clear blackberry or other woody weeds for 6 months after spraying.
