

# Technical Information Sheet

## Remain *Surfactant*

**Active ingredients** 100% Non-ionic surfactant

**Pack size** 20L, 200L & 1000L kg

Remain is a residual soil surfactant blend specifically developed to relieve and prevent problems associated with hydrophobic soils in most turf and horticultural situations.

Remain assists in water management by improving water penetration and increasing the wetting pattern width in the soil profile. Through improved soil moisture availability over a greater soil area, enhanced plant vigour can be achieved by limiting periods of water stress. The surfactants within Remain are non-ionic with residual properties in excess of an 8 week period.

Remain alleviates and prevents problems associated with localised dry spots (LDS) and is a low burn formulation for increased plant safety.

### Benefits

- 100% surfactant formulation
- Cost effective for large scale application
- Low burn formulation
- Suitable for use in greens, sports fields, fairways, open spaces and amenity situations
- Residual activity in excess of 8 weeks when applied at the higher application rates
- Improves water usage by improving water penetration and retention
- Reduces irrigation requirements by increasing the rate and depth of water penetration

### Product Characteristics:

Colour	pH	Specific Gravity
Clear Liquid	6-8	1.02

### Directions for Application (Refer to product label for more detailed instructions)

Remain works best when applied early in the season prior to moisture stress. However, it can be used curatively to relieve plant stress due to hydrophobic soils at any time during the year.

SITUATION	RATE/ 100m <sup>2</sup>	RATE/ ha	COMMENTS
Turf - Boom application greens, tees, surrounds	250-500ml	25-50L	Apply in at least 500L of water per hectare. Irrigation is recommended to ensure product effectiveness. Apply monthly or repeat treatments at the desired application frequency.
Turf - Boom application fairways, sports fields and other large turf areas	100-500ml	10-50L	
Crops / Broadacre - Injection Irrigation	25-50ml	2.5-5L	Apply on a monthly basis or as required throughout the growing season. The greater the frequency of application, the greater the water use efficiency
