

Striker Trifecta

Racecourse Perennial Ryegrass Blend

The **Striker Trifecta** perennial ryegrass blend includes three of the best. **Impact 2** is a finely tillered, later flowering ryegrass that produces excellent spring/summer growth, while **Kidman** provides excellent growth late in winter/early spring. Together with **RPR** ryegrass the perfect year round partnership is created.

Impact 2 Perennial Ryegrass

Impact 2 is an exceptional ryegrass due to its fine tiller density and the endophyte NEA2, providing outstanding persistence, insect resistance, rust resistance and improved track wear performance. **Impact 2** is late flowering and has excellent winter to late spring and early summer growth.

Impact 2 is arguably the best variety to come from the NZ Agriseeds breeding program to date. **Impact 2** has the ability to persist in difficult environments and management conditions because of the strength of NEA2 endophyte and the high tiller density of a diploid ryegrass. NEA2 the natural endophyte of **Impact 2** provides excellent resistance particularly against black beetle and root aphid.

Kidman Perennial Ryegrass

Kidman is an early flowering diploid perennial ryegrass. It has high autumn, excellent winter and early spring growth. Leaves of **Kidman** are medium-fine and deep green in colour and exhibit exceptional tiller density and excellent rust resistance making it ideally suited to racetracks. **Kidman** has been selected for very low levels of aftermath heading and quick return to vegetative production thus maintaining quality year round compared to older varieties.

Regenerating Perennial Ryegrass (RPR)

It is **RPR's** regenerating ability that separates it from traditional perennial ryegrass. **RPR** plants develop pseudo-stolons, which allow them to regenerate in all compass directions. It has superior wear tolerance, is dark green and drought tolerant.

RPR stolons showing lateral spread

At left regular perennial ryegrass. At right RPR after one year.
